TRANSACTION SET 834 – BENEFIT ENROLLMENT AND MAINTENANCE EDI MAP	9

INTRODUCTION

In 1996, Congress passed the Health Insurance Portability and Accountability Act (known as HIPAA). This act requires EDI transactions to use the newly approved 4010 version of EDI standards in their implementation of electronic data exchange.

California*Choice* will be transitioning to the HIPAA required EDI version 4010 transaction sets. The only transaction sets in current use are the 834 Benefit Enrollment and Maintenance and the 997 Functional Acknowledgment. To be in compliance with the HIPAA required implementation, there will be changes to not only the data transmitted, but also to the structure of the loops.

Functional Acknowledgments (FA) are required for each functional group transmitted. See the Functional Acknowledgment Section for further information.

The purpose of this document is to guide and assist the trading partners of California*Choice* in receiving Benefit Enrollment and Maintenance transactions via EDI. The implementation of the 834 Transaction Set (version 4010) as described herein is believed to be within the rules and regulations set forth by HIPAA information.

The nature of this document is technical; as such it should be used by EDI technical or support staff responsible for developing programs to receive EDI transmissions from California*Choice*.

Benefit Enrollment and Maintenance

Functional Group = **BE**

This Draft Standard for Trial Use contains the format and establishes the data contents of the Benefit Enrollment and Maintenance Transaction Set (834) for use within the context of an Electronic Data Interchange (EDI) environment. This transaction set can be used to establish communication between the sponsor of the insurance product and the payer. Such transaction(s) may or may not take place through a third party administrator (TPA).

For the purpose of this standard, the sponsor is the party or entity that ultimately pays for the coverage, benefit or product. A sponsor can be an employer, union, government agency, association, or insurance agency. The payer refers to an entity that pays claims, administers the insurance product or benefit, or both. A payer can be an insurance company, health maintenance organization (HMO), preferred provider organization (PPO), government agency (Medicare, Medicaid, Champus, etc.), or an entity that may be contracted by one of these former groups. For the purpose of the 834 transaction set, a third party administrator (TPA) can be contracted by a sponsor to handle data gathering from those covered by the sponsor if the sponsor does not elect to perform this function itself.
